[5059]-647**B.E. (Computer Engineering)****DATA MINING TECHNIQUES AND APPLICATIONS****(2012 Pattern) (Semester - I)***Max. Marks : 70**Time : 2½ Hours/**Instructions to the candidates:*

- 1) Answer Q1 or Q2), Q3) or Q4), Q5) or Q6), Q7) or Q8).
- 2) *Neat diagrams must be drawn wherever necessary.*
- 3) *Figures to the right side indicate full marks.*
- 4) *Assume suitable data, if necessary.*

Q1) a) In real-world data, tuples with missing values for some attributes are a common occurrence. Describe various methods for handling this problem.

b) Explain the following terms : [6]

- i) Constraint-based rule mining.
- ii) Closed and maximal frequent itemsets.

c) Consider the following data for a binary class problem [8]

A	B	Class
T	F	P
T	T	P
T	T	N
T	F	P
T	T	P
F	F	N
F	F	N
T	T	P
T	F	N

Q3) a) Consider the following points six points :

P1(0.40, 0.53), P2(0.22, 0.38), P3(0.35, 0.32), P4(0.26, 0.19), P5(0.08, 0.41) and P6(0.45, 0.30).

Perform the single link hierarchical clustering and show your results by drawing a dendrogram.

- b) Explain with suitable example the k-medoids algorithm
- c) What are the requirements of clustering in data mining?

OR

Q4) a) What is meant by cluster analysis? [4]

b) Explain with suitable example the K-means algorithm. [5]

- c) Differentiate between following clustering methods
 - i) Single and complete link
 - ii) Hierarchical and partitioning

- i) Compute the information gain for A1 and A2.
- ii) What is the best split between A1 and A2 according to Information gain?
- iii) Compute the Gini index for A1 and A2.
- iv) What is the best split between A1 and A2 according to Gini index?

OR

Q2) a) Consider the market basket transactions shown below : [6]

Transaction ID	Items bought
T1	{M, A, B, D}
T2	{A, D, C, B, F}
T3	{A, C, B, F}
T4	{A, B, D}

Assuming the minimum support of 50% and minimum confidence of 80%

- i) Find all frequent itemsets using Apriori algorithm.
- ii) Find all association rules using Apriori algorithm.

b) What are the major tasks in data preprocessing? Explain them in brief. [6]

c) Explain with suitable example :

- i) k-Nearest-Neighbor Classifier
- ii) Scalable decision tree

- Q5)* a) Precision and recall are two essential quality measures of an information retrieval system.
i) Why it is usual practice to trade one measure for the other? Explain.
ii) Why F-score is a good measure for trade between precision and recall.

b) Compare the different text mining approaches.

- c) Explain the following terms :
i) Bag of words
ii) Feature vector

OR

- Q6)* a) What is Web usage mining? Explain in brief.

- b) Differentiate between document selection and document ranking methods of information retrieval.

- c) Explain the following terms :
i) Authoritative Web pages

- ii) Hub pages
iii) Document Object Model (DOM) structure

- Q7)* a) What is meant by machine learning? Differentiate between supervised and unsupervised machine learning.

- b) What are the similarities and differences between reinforcement learning and artificial intelligence algorithms?

- c) Write short note on mining of big data.

OR

- Q8)* a) What is meant by wholistic learning?

- b) Briefly explain the reinforcement learning.

- c) What is meant by multi-perspective decision making? Explain.
